

Case Study:
Contract abstraction and migration

Enhanced speed and efficiency in **data abstraction and summarization** through use of **genAI**

Client
Large US manufacturing company

Challenge
Summarization and abstraction of key data points across 40,000 documents within a tight timeline, without compromising accuracy.

Solution
Integreon leveraged Leah Legal Copilot to create and validate the data model and to further streamline the summarization and abstraction process. A playbook was also developed to establish rules for summarization and data analytics, as well as to ensure consistency and accuracy.

Results
The project successfully delivered a summary of more than 50 critical data points across the 40,000 documents within the stipulated timeline, meeting the company's expectations. Furthermore, over 300 key terms were abstracted for data analysis, enabling the company to gain valuable insights from the vast amount of information.

Key Takeaways

By implementing a structured approach and leveraging technology, the company efficiently tackled the task of summarization and abstraction, achieving the desired outcomes within the set timeline.

1. Using a dedicated team from a service provider that utilizes advanced technology can transform complex data abstraction and migration processes.
2. Developing clear rules and playbooks for data migration ensures consistency and accuracy in the outcomes.
3. Leveraging GenAI platforms can significantly enhance speed and lower costs for abstraction and migration projects.
